Technical Skills

Core Technologies	Unity, C#, .NET, Git
UI	uGUI, UI Toolkit, DOTween, UniTask
Platforms	Xbox (Series X S / One), PlayStation 4/5, Nintendo Switch, Steam Deck
Tools / SDKs	Figma (UI/UX Design), Memory Profiler, Unity Addressables, Unity Localization, Steamworks SDK
Languages	Polish (Native / C2), English (C1)

Work Experience

Unity UI Developer <i>Cubepotato Games – Telegraphist 1920: Beats of War</i>	03/2023 – Present <i>Remote</i>
- Forked the Facepunch.Steamworks library and a dynamic controller glyph system, extending integration with native Steam Input support and Steam Deck compatibility. - Adapted the UI for a handheld console (Steam Deck): improved readability for a 7-inch display and full built-in gamepad support. - Developed a playable prototype in 24 hours at the HackYeah 2022 hackathon (2nd place among 2,300 participants), which became the foundation of a full commercial project.	
Unity UI Developer <i>Triple Espresso – COPA CITY</i>	06/2025 – 09/2026 <i>Remote</i>
- Built a library of reusable UI components from Figma mockups (HUD, management panels, modals), used by a 5-person UI design team to construct game screens. - Diagnosed reflection-based scripts as the cause of excessive load times and cut loading below the 3-minute threshold, meeting Xbox technical certification requirements. - Modified uGUI source code to identify and eliminate elements and scripts forcing unnecessary per-frame Canvas rebuilds at idle, reducing CPU overhead from 4ms to 1ms.	
Unity UI Developer <i>Draw Distance – Vampire: The Masquerade - Reckoning of New York</i>	06/2023 – 06/2024 <i>Kraków, Poland</i>
- Collaborated on UI/UX design in Figma and implemented UI across Xbox, PlayStation, and Nintendo Switch, including a dialogue system inspired by <i>Disco Elysium</i>. - Deployed and customized the Flow tool within Unity UI Toolkit for visual editing of branching dialogue trees by the narrative team.	
Unity Developer <i>Wenkly Studio – Survival Nation</i>	03/2022 – 05/2023 <i>Remote</i>
- Implemented and debugged networking mechanics in Photon Fusion, including movement and weapon synchronization and Input/State Authority handling, for an open-world VR RPG. - Increased average FPS by 32% (measured via Unity Profiler), including through World Space Canvas toggling optimization and a custom recyclable scroll view system.	

Accolades

1st Place: Steelworks Game Jam, 2023 and 2025 editions <i>Nowohuckie Centrum Kultury (NCK)</i>	02/2023 & 11/2025
PARP Travel Grant for Game Developers Conference (GDC) in San Francisco <i>Polish Agency for Enterprise Development (PARP)</i>	03/2025
2nd Place: HackYeah 2022, GameDev category (2,300+ participants) <i>PROIDEA Sp. z o.o.</i>	11/2022
